

Package Quality Assurance

Release evidence for domain safety, claims, reconciliations, rendering, approvals, and package integrity.

CLIENT	Kakawa Chocolates
EVIDENCE AS OF	2026-07-15
RUN	KAKAWA-ENT-20260715
STATUS	PASS_FOR_REVIEW

This report distinguishes verified evidence, derived analysis, professional judgment, and unavailable data. No client website or external platform was changed.

Release decision

QA VERDICT

Critical and High package QA failures are zero. Private-source baselines and human Gate 1/Gate 2 approvals remain explicit production blockers.

Gate	Status	Critical	High	Evidence
Approved-domain boundary	PASS	0	0	0 wrong-domain URL records
Normalized URL deduplication	PASS	0	0	5 duplicate observations collapsed; 0 remain
Evidence lineage	PASS	0	0	Every finding and action resolves to evidence IDs
Claim support	PASS	0	0	All published content claims have explicit evidence IDs
Risky deployment controls	PASS	0	0	Unapproved risky proposals are withheld, not executable
Cross-artifact reconciliation	PASS	0	0	Canonical counts are exported from one dataset
Private provider evidence	UNAVAILABLE	0	0	Credentials were not configured
Gate 1 and Gate 2 approvals	NOT_RUN	0	0	Human decisions are required before production

Reconciled counts

Measure	Canonical	Package	Result
Normalized pages	357	357	PASS
Aggregated findings	5	5	PASS
Canonical actions	16	16	PASS
Content assets	6	6	PASS
Duplicate normalized pages	0	0	PASS
Duplicate observations collapsed	5	5	PASS

Known limitations

- GSC, GA4, SEMrush and PageSpeed were not collected because credentials were unavailable.
- The overall health score is withheld because weighted evidence coverage is below 70%.
- No traffic, ranking, conversion, revenue, backlink or performance forecast is present.
- Content and risky deployment proposals are withheld pending human Gate 1/Gate 2 and agency-admin decisions.
- No live CMS, Search Console, analytics platform, robots file, redirect map, schema or disavow system was changed.
